

## ABOUT MICHALSKI NIELSEN ASSOCIATES LIMITED

Michalski Nielsen Associates Limited (formerly Michael Michalski Associates) has been providing environmental consulting services throughout Ontario and also in Quebec and Nova Scotia, since 1983. The firm provides expertise on the natural environment and surface water issues to a broad range of public and private sector clients.

## WHAT STANDS US APART

Michalski Nielsen Associates Limited prides itself in providing personal, professional, practical, and cost-effective input to often complex issues surrounding land use change and its impact on the natural environment.

We make a point of understanding our clients, and their specific project needs, in order to serve them better.

The company maintains a small staff and focuses specifically on natural environmental issues, in order to provide our clients with the personal service and experience to complete their project as efficiently as possible.

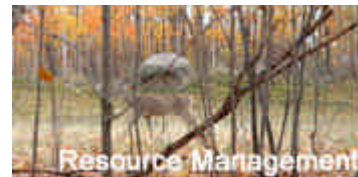

We understand our role in the project, and the importance of other members of the project team. On most assignments we work closely with planners, engineers, lawyers, architects, landscape architects, hydrogeologists, and a variety of other professionals.

We are results oriented, and know the approval process and how to ensure projects move through it as seamlessly as possible. We have a strong working relationship with all the approval authorities, and have been very effective in helping them understand our clients' positions, and resolving complicated matters.

Our staff knows that issues related to the natural environment are important to many people, and understand the value of effectively communicating with the public, and building their support.

While the collection of good quality environmental inventory information is a critical part of our practice, our knowledge of the implications of this information to land use change is equally important. We understand land use change, its potential implications to resource features, and the most effective ways of mitigating harmful impacts.

Our work is solid and the positions we take are defensible. With well over 100 appearances before the Ontario Municipal Board and other legislative tribunals, and considerable additional experience before the courts, we have consistently and successfully defended our positions as environmentally sound.
